

ENC904

INNOVATIVE AND SMART DESIGN

ENC904 is a double chute, double door, waste receptacle. Designed to be used with two inner containers to hold the waste bags. **ENC904**'s "mailbox style" chutes are designed to be accessibility compliant, plus they limit the size of the waste being disposed of to only "small trash" to limit people from bringing their home trash to a park environment.

ENC904 can be used for two streams of garbage and/or recycling, and/or organics, or even pet waste. We can provide labeling to identify the stream of waste that should be put into the bin.
