

# ENC903

- **ENC903** is a single chute, single door waste receptacle. Designed to be used with an inner container to hold the waste bag. The POLAR-PICNIC's "mail box style" chute door is designed to be easy and safe to use. The chute door will always close and lock by gravity, without slamming too hard. The waste that is deposited will always be directed into the inner container to prevent spills.
- **ENC903**'s chute door is designed to be Accessibility Compliant. TuffBoxx will be applying to be certified as Accessibility Compliant as soon as possible.
- The 6" x 10" chute opening limits the size of the waste being disposed of to only "small trash" to prevent people from bringing their home trash to a park environment.
- **ENC903** can be used for garbage, recycling, organics, or even pet waste. We can provide labeling to identify the stream of waste that should be put into the bin.
- **ENC903** is easily strong enough to keep out the smaller critters like raccoons, squirrels, and rats, etc, and will give great results even with Black and Grizzly Bears (up to around 600 Lbs.).
- For larger Grizzly, Kodiak, and Polar Bears, it may be necessary to upgrade **ENC903** to heavier gauge metal
- **ENC903** must be securely mounted to a concrete pad or other solid base with the mounting system that is built into the bottom of the bin's base.
