

## RAZORBACK FLAG OPTION

**INSTRUCTIONS** - make up a separate instruction sheet and post with the other.

- 1)** If flag option is purchased, select the best location on your Razorback to place the hinge flag (the location where your waste collector can best see it)
- 2)** If signage option is purchased, Remove the backing from the two pieces of adhesive tape, and place the hinge flag on your Razorback

**Note:** The adhesive tape is very strong, please ensure you place the hinge flag in the right location the first time. You may want to consider marking the location ahead of time to ensure its the right spot, and that it is level (so it looks good).

- 3)** Open the hinge to reveal the sticker surfaces when there is garbage or recycling in the bin.
- 4)** Close the hinge when there is no garbage or recycling to pick up.

The Hinge/Flag is made with stainless steel, and should be fairly low maintenance for a long life. However, if there is lots of dirt or salt buildup it could get a little tight to open after a few seasons. If that is the case, just lubricate it once a year with a lubricant like WD-40 or similar, and you should have great results.
